Dear Sir

This is my submission to the state review of the moratorium on genetically engineered food crops.

I strongly urge you to stop genetically engineered (GE) canola from contaminating our food, by recommending the extension of the current moratorium on GE food crops.

I know you are aware of the many startling facts about GE canola - it's unavoidable contamination of non GE crops; the high likelihood of herbicide resistance; the costs to farmers; the costs to consumers and the public health system through negative health effects; the inability to regulate which food chains this gets into; etc etc etc.

I SHUDDER at the thought that our politicians would consider allowing this to come into Australia, when we know so much about how dangerous it is and how irreversible the decision is. I will be watching to see which politicians are responsible for this decision, and will hold them accountable for this nightmare, which will make the cane toad seem benign.

Yours sincerely  
Ms Beth Fuller
