Subject BAN GM FOOD

Submission 219
RECEIVED
DU

Attention to Premiers and GM review board,

Given the uncertain effect on possible detrimental effects of GM food on our health and the environment, it is impossible to guarantee that organic or locally grown food is GM-free

1. Genetic engineering is unreliable, unsafe and proven to be completely unnecessary.
2. There has been hidden truth and mis-leading to the public that GM food is safe, but the testing is carried out by the biotech companies and subsequent enjoy the monetary benefit by making such statement
3. Growing GM crops also threatens our environment. Contamination is inevitable and more pesticides will be used and this will cause more health problems as well as causing the environmental harm.
4. GM food is NOT required or essential to feed the world. The GM industry says it will feed the world's poor, but where is the evident??? But to just controlling the world's food supply.
5. The most dangerous outcome is the effect on our health and that of our children given the widespread damage

Banning GM foods is crucial to remaining a safe and healthy nation. We have the right to eat safe and be healthy through a clean and safe real food – in the Nature way!

Thank you for your time and sincerely seeking your consideration.

Julia Dalton
