

## **KIMBERLEY DRIPPS**

Kimberley started her career as a veterinary surgeon, practicing for six years in the dairy industry before joining the Department of Natural Resources and Environment in 1999. In NRE she progressed through a range of roles focused on policy development (in science, natural resource management, and agriculture) and program development and management (research and development, and natural resource management). She now manages state government investment in integrated sustainable farming systems: including salinity, water quality and use, waste management, biodiversity conservation and the development of more sustainable farming systems. The role builds on her passion for the environment and for science, and her MBA studies.
