

GEOFF PARK

Geoff Park works as a Knowledge Broker – Biodiversity Research and Development with the North Central Catchment Management Authority (in collaboration with the Mallee, Goulburn-Broken and North East CMA's). In this role he is responsible for the development of collaborative partnerships between researchers, extension staff and landholders that lead to improved knowledge exchange and on-ground native vegetation outcomes. He is also currently theme leader (knowledge brokering) for the CERF Landscape Logic program, a collaboration between six NRM regions across Victoria and Tasmania and seven research organisations.

His background is in landscape ecology, teaching and community education and he was involved in the establishment of the Victorian Landcare Centre at Creswick (from 1992 – 1998) and in various roles with the North Central CMA since then. He has a long standing interest and involvement with communities working to improve biodiversity conservation in agricultural landscapes. Geoff is currently working on a range of projects that improve community and landholder access to NRM knowledge and spatial tools that improve on-ground environmental outcomes.
